Secure prescriptions

‘Electronic prescriptions are mandatory in the Dutch healthcare system. Our electronic prescription system (EVS) is not just efficient and secure, it is also the most versatile. That is why it is the most popular EVS in the nursing, mental health and intellectual disability care sector.’

The most used EVS

As a healthcare facility obliged to issue electronic prescriptions, it makes sense for you to choose the most complete solution. Our electronic prescription system (EVS) is the most popular EVS in Dutch nursing, mental health and intellectual disability care facilities. Multiple connections to EPDs and ECDs and the National Exchange Point (LSP), personal health environments (PGOs), thrombosis services and pharmacy system result in more efficient collaboration. This reduces the risk of errors.

Work more securely with the electronic prescription system

Prescribing medication with our electronic prescription system is efficient, secure and very user-friendly. The system guides the prescriber with pre-programmed protocols and proactive advice. Medication recommendations are generated while writing the prescription and the prescriber is warned of deviations from the protocol.

Improved safety

All pharmacies in the Netherlands can receive prescriptions from our system and both inpatient and outpatient prescriptions are supported. Medication orders no longer need to be copied over manually and are processed entirely digitally. This improves the efficiency of the joint efforts of the prescriber, the pharmacy and the healthcare provider and increases safety.

Automated synchronisation

Our prescription system is linked to electronic client and patient dossiers (ECD/EPD). Lab results and medical data are automatically imported and synchronised. The prescription system is also linked to all pharmacy systems, the thrombosis service and the LSP. This gives healthcare professionals access to all relevant information and reduces the risk of errors.

Medication Prescription in the healthcare process

No handwritten prescriptions

Reduced risk of errors

Compliant with law and regulations

Can be used on any device

Linked to the LSP
