Capacity optimisation

'Insight into capacity helps healthcare organisations deliver more care with limited resources. By providing real-time insight into staff, beds and patient flows, it creates control over healthcare capacity and enables better planning and collaboration across the healthcare sector.'

Maintaining control over capacity

Healthcare organisations are facing increasing pressure due to growing demand and workforce shortages, so efficient use of staff, beds and facilities is essential to guarantee quality healthcare. An intelligent digital solution that offers real-time insight and supports processes helps make healthcare more sustainable for the future.

Smart software for capacity management

Capacity from Enovation provides healthcare organisations with a powerful digital solution to optimise the use of staff, beds, outpatient clinics and operating theatres. Real-time dashboards and predictive analytics offer insight into patient flows, planning and capacity requirements, enabling organisations to allocate resources more effectively and safeguard continuity of healthcare.

Insight and integration

With real-time dashboards and modules such as Production Capacity, Tactical, Operational and Regional Control Centers, healthcare organisations gain immediate insight into patient flows, staff scheduling and capacity needs. This makes it possible to balance workloads more evenly, reduce peaks and organise care processes more efficiently. By linking production, staffing and financial data, organisations gain a complete picture to support efficient planning and decision-making.

Capacity in the healthcare process
